Overall Length	45 inches (114.3 cm)

BARRETT M95

The Model 95 is a perfect rifle for the shooting enthusiasts who enjoys firing a smaller, lightweight .50 caliber rifle with emphasis on accuracy and durability. The robust bullpup design results in a compact rifle with no sacrifice on accuracy or velocity thanks to its cryogenically treated 29-inch (73.7 cm) barrel, the same length as the Model 82A1. Recoil is reduced by the dual-chamber muzzle brake and specially designed recoil pad.

The rugged 3-lug bolt of the Model 95 locks rigidly into the barrel extension to accommodate the widest variety of factory ammunition loads. The adjustable bipod may easily be detached by removing a single quick-release pin. The Model 95 is set up to mount a variety of telescopic sights and with good ammunition this combination usually produces minute of angle (MOA) accuracy. The Model 95 may be disassembled for cleaning without tools.
